

# Decypher

## Classic Puzzle Game

Current Version: 1.1, for iPhone and iPod touch

### Objective

Solve the secret code before your guesses run out! The secret code is a sequence of up to 6 colors, depending on difficulty. Be careful - colors can repeat in the same code!

### How To Play

To enter a guess, touch colors in the bar at the bottom of the screen. When you enter a color, the cursor (glowing white shape) moves to the right, just like typing text. A guess is complete when there are no white or gray shapes left. Once complete, Decypher shows you a hint about how close your guess is to the code.

### Hints

Decypher shows clues about how close each guess is to the secret code. These hints are drawn to the right of the guess. In the hint, each red dot indicates that one of the colors is the correct color in the correct position. Each white dot means that one color is right, but its position is wrong. Each X means that one of the colors is just wrong. The hint only shows information about the colors, not their positions!

### Winning/Losing

If you solve the code, Decypher changes the background of your correct guess to blue. Your time and number of guesses is added to the Hi Scores. If you don't solve the code, Decypher shows the answer as a new guess with a red background. In both cases, the hints show four red dots. Click a color in the bar to start a new game.
